

VitalScan Frontend Test Report

Test run: 23 July 2026 | Local Vite application

Build	Frontend pages	Console result	Lint
PASS	6 routes rendered	2 errors found	FAIL - 13 errors

Tests performed

Area	Result	Evidence
Production build	PASS	npm run build completed successfully.
Home page	PASS	Hero, navigation, feature and workflow content rendered.
Report page	PASS	Health metrics, recommendations and PDF download control rendered.
PDF report action	CHECK	Click caused no console error; browser test harness did not observe a download event.
Scan page	PARTIAL	Inputs and scan interface rendered. Live scan was not run because it requires camera approval and saves data.
Dashboard	PARTIAL	Dashboard rendered, but the health chart request failed with HTTP 502.
History page	PASS	History page and report table rendered; no records were available.
About and Login	PASS	Both routes rendered successfully.
Static analysis	FAIL	npm run lint reported 13 errors.

Issues requiring attention

Priority	Issue	Recommended action
High	The dashboard chart calls /api/reports, which returned HTTP 502 during testing.	Connect HealthChart to the existing report service or provide the missing backend endpoint.
Medium	ESLint reports 13 errors, including explicit any types, Fast Refresh export warnings, and a state update in an effect.	Resolve lint findings before release and add the lint command to CI.
Medium	There are no automated frontend test files or test-runner configuration in the project.	Add component tests and end-to-end tests for report generation, navigation, camera denial, and failed API states.

Release recommendation: Do not treat the current frontend as release-ready until the failed chart request and lint errors are fixed, and the camera and report-save flow are tested with an approved test account.

Frontend test checklist

Use this checklist for every release. Mark each case as Pass, Fail, Blocked, or Not Applicable and record the browser/device used.

1. Navigation and page rendering

Test case	Status	Notes
Open every route: Home, Scan, Dashboard, Report, History, About, Login, and Register.	Not tested	
Verify navigation links, browser back/forward behavior, and direct URL loading for each route.	Not tested	
Check headings, buttons, cards, tables, images, and empty states render without layout overlap.	Not tested	
Verify mobile, tablet, and desktop breakpoints with no horizontal overflow.	Not tested	

2. Report and PDF download

Test case	Status	Notes
Verify health values shown in the report match the latest completed scan.	Not tested	
Test Low, Medium, and High risk recommendations.	Not tested	
Click Download Report (PDF) and confirm the file downloads successfully.	Not tested	
Open the downloaded PDF and check its filename, timestamp, health summary, recommendations, and disclaimer.	Not tested	

3. Scan workflow

Test case	Status	Notes
Test camera permission allowed, denied, unavailable, and already-in-use states.	Not tested	
Validate Age, Sleep Hours, and Stress Level inputs for empty, invalid, boundary, and valid values.	Not tested	
Test file input selection and remove/replace behavior if the file is intended to be used.	Not tested	
Run a scan with an approved test account and verify progress, results, alert messages, and report persistence.	Not tested	

4. Data, errors, and security

Test case	Status	Notes
Verify dashboard totals, chart data, and report history use the same saved reports.	Not tested	
Test loading, empty, failed API, slow-network, and retry states for reports.	Not tested	
Verify login, logout, registration, invalid credentials, and protected-route behavior.	Not tested	
Confirm no sensitive health details are exposed in browser console, URLs, or error messages.	Not tested	

5. Accessibility and quality

Test case	Status	Notes
Navigate all interactive controls with keyboard only and verify visible focus states.	Not tested	
Check form labels, button names, heading order, color contrast, and screen-reader announcements.	Not tested	
Run lint and production build with zero errors before release.	Not tested	
Run the suite on current Chrome, Edge, Firefox, and a mobile browser where supported.	Not tested
